Purpose of the Study: The purpose of this study is to develop a greater understanding of the perceived impact of the standards-based teacher evaluation system on professional practices in Iowa. Survey responses of teachers and administrators will be compared to determine if there is a significant difference in the perceived utility of the standards-based evaluation system between these two subgroups.

Exclusions: You must be at least 18 years of age to participate in this study, have teacher certification in the state of Iowa, and have taught at least one year in a school district where the standards-based evaluation system is being utilized.

Description of Research Method: The study is divided into two distinct components. The first component will utilize separate but parallel survey instruments to gather responses from teachers and administrators in seven sub-categories related to teacher evaluation. The second component will include a statistical comparison of teacher and administrator survey responses. The purpose of the comparability study is to determine if there is a significant difference in the perceived utility of the standards-based evaluation system reported by teachers when compared to that reported by administrators.

In addition to the survey questions, you will be asked about your years of teaching experience, current teaching assignment, gender, school size and the year in which your most recent evaluation was conducted. The survey should take no more than 10 minutes to complete.
